

BREATHE NAIROBI PROJECT

WHO WE ARE - ECAS Institute

The Environmental Capacities & Sustainability Institute (ECAS) is an independent think tank based in Nairobi, Kenya, specializing in training, research, and policy advisory services on environmental, energy, and climate-related issues.

For over 9 years, ECAS has addressed data, skills, and policy gaps across Africa through practical and impactful programmes. Our work spans climate adaptation, sustainable energy, circular economy, and natural resource governance.

We have worked with clients and partners across the globe in private sector, government agencies, organizations, groups, individuals and communities across the globe.

WHY AIR QUALITY MATTERS

Air pollution is one of Nairobi's most urgent public health and environmental challenges. From transport emissions to industrial smoke and improper waste disposal, poor air quality threatens the health of communities, especially in informal settlements and high-traffic areas.

The ECAS Institute, in partnership with the Nairobi City County Government and the Clean Air Fund, is driving change through an Air Quality Programme focused on strengthening governance, building technical capacity, and empowering communities with knowledge and data to improve the Nairobi city's air quality.

PROJECT OVERVIEW

In partnership with the Nairobi City County Government and the Clean Air Fund, ECAS Institute is supporting the “Breathe Nairobi” initiative, a city-wide effort to reduce air pollution and carbon emissions by 30% by 2030.

ECAS plays a key role in stakeholder mapping, technical write-shops, capacity building, and developing the county’s Clean Air Roadmap. Through this collaboration, Nairobi is integrating clean air into local policies, improving data access, and building stronger public awareness around air quality.

PROJECT OBJECTIVES

01

Strengthen Air Quality
Monitoring & Data Access

02

Support Policy &
Regulation
Development

03

Build Institutional &
Community Capacity

04

Promote Clean Mobility
& Emissions Reduction

PROJECT STAGES

01

STAKEHOLDER MAPPING & CONSULTATION

Identify key actors and engage them in shaping Nairobi's air quality regulations through inclusive consultations.

02

DESKTOP REVIEW

Review existing policies, studies, and data to guide evidence-based regulations development.

03

TECHNICAL WRITESHOP

Collaborative session with experts to draft a practical and informed Air Quality Regulations

04

STAKEHOLDER VALIDATION AND FEEDBACK

Gather feedback from diverse stakeholders to refine and validate the Draft Air Quality Regulations

05

COUNTY LEADERSHIP ENGAGEMENT

Engage senior county officials to build support and align the Draft Air Quality Regulations with county priorities.

06

COUNTY ASSEMBLY ENDORSEMENT

Present the Draft Air Quality Regulations to the County Assembly for formal endorsement and policy backing.

07

DEVELOPING TRAINING MODULES

Create tailored training content for government officers, communities, and key stakeholders.

08

CAPACITY BUILDING WORKSHOP

Conduct training sessions to equip responsible parties with skills to implement air quality actions.

COMPLETED STAGES

» STAKEHOLDER MAPPING & CONSULTATION

Conducted for 2 days with 40 attendees each day

» DESKTOP REVIEW

Conducted for 5 days with 12 attendees each day

» TECHNICAL WRITESHOP

Conducted for 5 days with 25 attendees each day

» STAKEHOLDER FEEDBACK AND VALIDATION

Conducted for 5 days with 25 attendees each day
